

PVT Detector

OVERVIEW

PVT Detector is a unique solution intended to continuously monitor IC status at several on-die locations. It is able to detect manufacturing process deviation, perform voltage and die temperature measurement. PVT detector consists of PVT module and voltage/temperature sensor units. PVT module is a calculation center that contains process detector units and two embedded voltage/temperature sensor units (the first one is connected to AVDD and the second one – to DVDD). Also it is able to maintain up to 14 external voltage/temperature sensor units. IP technology: UMC 55nm eFlash CMOS technology.

IP status: pre-silicon verification.
 Area: PVT module - 0.2902 mm²;
 sensor unit - 0.000649 mm²
